

BIOSTRATA
innovative . natural . effective

BIO•LUCENT
white detox program

an innovative, high efficacy depigmenting program that works to address **past, present and future** signs of melanin.

anti-pigmentation | skin brightening

BIO•LUCENT white detox program

diminish, inhibit and prevent.

an advanced skin brightening program with a high efficacy in diminishing the appearance of age and sun spots, melasma and hyperpigmentation for clearer, brighter and healthier skin.

multi-targeting actives address present and future melanin synthesis

diminish surface pigmentation + purge trapped melanin + inhibit future melanin formation

the future is brighter...

our specifically tailored high-performance active ingredients include:

• glycolic acid • mandelic acid • kojic acid • gluconolactone • arginine • hyaluronic acid • tranexamic acid • ethyl ascorbic acid • TR-4MSK • anti free radical compounds

these provide a comprehensive mechanism for **reducing both present pigmentation and prevent future melanin synthesis**:

- inhibit activation of melanocytes to form melanin
- work from inside melanocytes to reduce melanin production
- reduce present melanin and stop pre-melanin synthesis to become melanin pigments
- accelerate epidermal turnover
- stimulate basal layer cellular division to enhance turnover
- push dead cells with melanin pigments off the epidermis to lighten dark spots

a synergy of innovative actives formulated for high efficacy:

1. m-tranexamic acid **inhibits the activation of melanocytes**

- acts to suppress inflammatory proteases that cause abnormal melanocyte activity
- targets persistent spots to control and inhibit excess melanin growth

2. TR4-MSK (potassium methoxycinnamate) **provides high efficacy skin brightening activity**

- offers longer term inhibitory effect
- suppresses growth of melanin and prevents dark spots and freckles

3. ethyl ascorbic acid (vitamin c derivative) **provides effective and sustained skin brightening activity**

- a tyrosinase inhibitor that inhibits polymerization of melanin
- promotes an instant and sustained whitening effect

4. vitamin a aldehyde (retinaldehyde) **accelerates epidermal cellular turnover**

- acts as a penetration enhancer to work in synergy with other actives
- positively influences RNA transcription processes of the skin
- leads to healthier cells and reduced visible signs of aging

5. alpha, beta and polyhydroxy acids **encourage healthy collagen and elastin production**

- helps to break intercellular cement, stimulate collagen synthesis and activate cellular regeneration
- lightening action is effective for the treatment of irregular hyperpigmentation

BIO•LUCENT white detox program

before
prior to starting sessions

after
8 - 10 sessions with
home care

fifth generation of skin brightening

our exclusive salon program objectives:

- **inhibit activation of melanocytes** to form melanin
- **work from inside melanocytes to reduce melanin** that has already formed and stop pre-melanin DHICA to become melanin pigments
- **stimulate basal layer cellular division** to enhance the turnover of keratinocytes and in the process, push the dead cells with melanin pigments off the epidermis to lighten dark spots

number of sessions recommended

- 10 x weekly sessions

designed to offer ease of use, low irritation and high efficacy

- session time: approximately 60 minutes

program main steps

- double cleanse
- patch test
- protect sensitive areas
- peel application
- peel neutralization
- gentle massage
- soothing gel mask
- soothing mist
- sunblock

program step	product	treatment time
make up removal	milk cleanser	3 minutes
cleanse	pro exfol prep wash	3 minutes
double cleanse	cleansing wash	3 minutes
skin patch test	strata 2001 ¹	2 minutes
special care	recovery cream (point application) ²	3 minutes
skin renewal	white detox ampoule ³	8 - 12 minutes
neutralization	neutralizer foam	5 minutes
cleansing	rinse and cleanse with cold water	3 minutes
balance + moisturize	bio lucent white detox massage cream	10 minutes
soothing care	post mist	2 minutes
hydrating mask	bio lucent white detox gel mask	15 - 20 minutes
post cabin	strata mist	2 minutes
	recovery cream/spf 35+++ /spf 50+++	

¹ if a positive skin reaction occurs (redness, irritation) it is advised that a more suitable treatment be given and not to proceed with the peel.
² point application of recovery cream to areas such as the inner and outer corners of the eyes, folds of the nose, ears and mouth.
³ apply a thin, even layer and leave on for 8 - 12 minutes depending on severity of condition. always ensure full neutralization and removal.

BIO•LUCENT white detox program

advanced white detox program home care series

with multi-targeting actives

diminish present pigmentation + purge trapped melanin + inhibit future melanin formation

active ingredients

- tranexamic acid • ethyl ascorbic acid • TR-4MSK • vitamin e acetate • vitamin a aldehyde • encapsulated salicylic acid
- palmitoyl pentapeptide-3 • acetyl hexapeptide-3 • deoxyarbutin • procysteine

1

day + night

white detox cream

incorporates innovative whitening ingredients to address melasma and skin pigmentation to brighten overall skin tone.

ethyl ascorbic acid

- a vitamin c derivative that inhibits the formation of melanin by restraining the Cu²⁺ activity of tyrosinase

TR4-MSK

- suppresses growth of melanin and prevents dark spots and freckles

m-tranexamic acid

- inhibits tyrosinase synthesis, preventing new pigmentation spots and freckles

palmitoyl pentapeptide-3 (Matrixyl™)

- stimulates the “matrix” layers in the skin - primarily collagen and fibronectin for enhanced collagen production
- encourages a reduction in the depth of wrinkles

acetyl hexapeptide-3 (argireline)

- a botox alternative that relaxes facial tension, providing a reduction in facial lines and wrinkles

vitamin e acetate

- a powerful antioxidant that deeply moisturizes and protects the skin

2

day + night (spot areas)

spot intensive target gel

incorporates innovative whitening ingredients in synergy with a Vitamin A derivative to diminish the intensity of melasma and skin pigmentation.

ethyl ascorbic acid

- a vitamin c derivative that inhibits the formation of melanin by restraining the Cu²⁺ activity of tyrosinase

vitamin a aldehyde (retinaldehyde)

- accelerates epidermal cellular turnover
- act as a penetration enhancer to work in synergy with other actives

m-tranexamic acid

- inhibits tyrosinase synthesis, preventing new pigmentation spots and freckles

deoxyarbutin

- a highly effective, gentle and safe active compared to arbutin, kojic acid and hydroquinone

3

night (twice weekly)

white detox gel mask

a brightening mask formulated with AQUAXYL | LIPOMOIST | SENSONOV WR and a synergy of whitening actives that moisturizes dull, dehydrated skin while improving skin clarity.

procysteine

- a double functioning active (skin lightening and anti-aging)
- infiltrates into the skin quickly
- prevents tyrosinase activity and the formation of melanin

m-tranexamic acid

- inhibits tyrosinase synthesis, preventing new pigmentation spots and freckles

encapsulated salicylic acid

- a beta-hydroxy acid that gently exfoliates the skin, helping to clear out congested pores and improve the appearance of fine lines, wrinkles, blemishes and post-blemish scarring
