

4ga Mini Dangler

Product Summary

Some customers use smaller barrels with delicate parts for their plating product. Also, some of our customers have small barrels that they use to plate sample products for their own clients.

In order to offer a complete line of dangler products TDG also manufactures a 4ga. dangler. We have found that in order to provide this lesser used product in a timely manner it is best for us to inventory the 4ga. dangler in a 24" length with a short plastisol coating and no terminal. We do inventory several different terminals that we can include with your order. However, because small barrel bearing holes differ in size we prefer not to connect them in advance. All of these small terminals can be crimped in a vise and the terminal made to size with a bench grinder. In most cases, the 24" length is adequate and can be shortened if needed. The head provided is $\frac{3}{4}$ " diameter and 3" in length. However, the head is dipped in plastisol and trimmed to 1.5" of actual exposure. If you wish to trim off more of the plastisol, you can do so with a razor knife.

Product Features

- ◆ **4ga. dangler**
- ◆ **Premade at 24" length.**
- ◆ **Short Plastisol Coating**
- ◆ **Terminal provided separately upon request.**
- ◆ **Commonly used in test /sample barrels.**
